¹The state counts are final resident counts. Nebraska's 1990 reapportionment count, released separately, was 1,584,617. This number includes persons who are U.S. U.S. military or federal employees and their dependents stationed overseas and who listed Nebraska as their home state.

²The 1990 population totals for Nebraska as well as Howard, Knox, Merrick, and Polk counties are corrected counts. The Census Bureau issued corrected population counts for these areas after the original 1990 counts and associated data products were published. Other detailed population tabulations were not revised to reflect the the corrections, so the final counts reported here will differ slightly from the population totals in other tabulations.

³Births and deaths are the totals for the 10 calendar years preceding the census year. Natural change is simply the difference between births and deaths.

⁴Net migration is the difference between population change and natural change. A positive value means that more people moved into an area than out of an area. A negative value means that more people moved out than moved in.

⁵The percentage value is based on the initial year. Therefore, the net migration percent for 1980-90 is the net migration number expressed as a percentage of the 1980 population.
