

AUDIOLOGIST

Audiologists diagnose, manage, and treat a patient's hearing, balance, or ear problems. Further, audiologists are also able to treat other issues such as ringing in the ears, sensitivity to loud noises and assess balance and equilibrium. Some audiologists also fit and dispense hearing aids and conduct research on hearing loss and related problems.

- » Obtain direct patient health care experience
- » Shadow professionals in the field

WHAT PRACTICING PROFESSIONALS SAY

The best part of being an audiologist is the immediate effects of a patient wearing a hearing aid for the first time, especially very old and frail patients and watching as their eyes light up when they are able to hear again."

-Alison Fry, Au.D

My mission in life is to use better hearing as a vehicle to leave a positive mark on the World we share. Helping people hear has allowed me to leave that mark on so many people. That is the legacy I will leave on this Earth far after I'm gone."

-Amy Holland, Au.D
