WHAT PRACTICING PROFESSIONALS SAY

Being a SLP has exceeded my expectations because it is always interesting and far from boring. The field evolves through research, so there are constantly techniques and approaches to learn.”

-Kimberly Scanlon, SLP

“I've been working as a medical Speech Language Pathologist in a trach/vent unit for 7 years. I find the work challenging, yet rewarding considering I get to witness patients transition from an inability to talk, eat, and drink to ultimately hearing their own voice and taking that first bite of food for the first time in months... It's truly rewarding.”

-Brett Cail-Forrest, SLP

At its core, communication sciences and disorders (CSD) is about working with people to improve their speech, language, hearing and other communication abilities. The goal of all CSD professionals is ultimately the same—to help humans effectively communicate— but how and where you work to achieve that goal is up to you.
