MOST PRESENTATIONS STINK

Featuring Dr. Jenna Yentes
Assistant Professor, Department of Biomechanics
University of Nebraska Omaha

October 7, 2016 | 12:00 - 1:00 pm | HPER 112

ABSTRACT

Everyone knows when they have seen a really great presentation, yet, many people don’t know when they are giving a terrible presentation. Yes, most people understand that tiny font, too many words, and too much clutter, can make the slides less than attractive. But what about you, not the slides? This interactive seminar will dissect the good and bad of several oral and poster presentations.

ABOUT DR. YENTES

Jenna Yentes, Ph.D., earned her Doctorate of Philosophy in Biomechanics/Motor Control at the University of Nebraska Medical Center in 2013. Her research focus was on Gait mechanics of pathological populations, cognition and gait control, human movement, variability coupling of biological rhythms. Dr. Yentes gave her dissertation on Functional outcomes associated with gait in patients with chronic obstructive pulmonary disease. Dr. Yentes is currently an assistant professor of Biomechanics at UNO and is researching chronic obstructive pulmonary disease (COPD).
