

2022 POVERTY IN NEBRASKA

After years of declining poverty, the COVID-19 pandemic impacted the well-being of Nebraskans in many ways, including an increase in poverty. According to the U.S. Census Bureau’s American Community Survey 5-Year Estimates for 2020, the official overall poverty rate in Nebraska is 10.4%, or 193,820 persons. Sheridan, Thurston, and Pawnee Counties experience poverty at the highest rates. Comparatively, Nebraska’s poverty rate is lower than average across the United States.

**Over 10 in 100
Nebraskans
are in poverty**

14%

of persons under age five are in poverty

12.2%

of persons under age 18 are in poverty

7.8%

of persons age 65 and over are in poverty

The poverty rate for younger age groups in Nebraska has trended down until COVID-19, while the poverty rate for those 65 and over has increased since before the pandemic

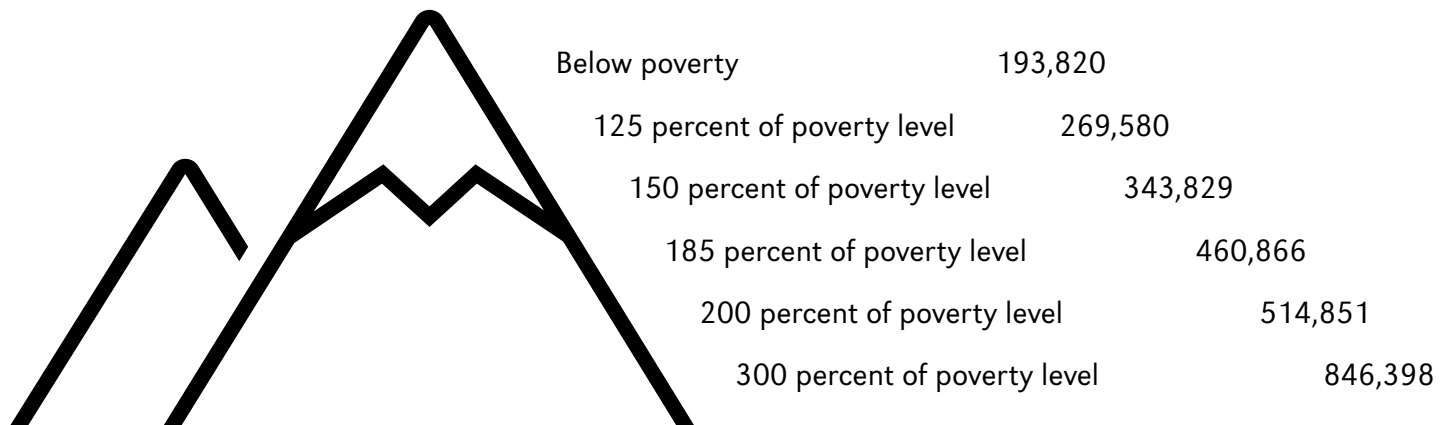

The official poverty definition is based on income and household size/composition. Thresholds are updated annually to adjust for inflation and are based on three-times the basic cost of food. The supplemental poverty measure (SPM) considers other sources of income (i.e., government benefits) as well as variation in a range of expenses such as clothing and shelter by geography. For Nebraska 2020, the SPM is 8.1% which is lower than the official poverty rate in Nebraska and most of the Midwest.

From 2010 to 2020, the overall poverty rate in Nebraska has trended down

The “cliff effect” refers to the phenomena that a household earning just \$1 more is considered out of poverty using the traditional poverty measure. This can often result in families losing eligibility for public assistance programs that are set by the federal poverty guidelines. The number of persons at percentages of the official poverty level for Nebraska in 2020 are shown below.

Those Most Likely to be in Poverty in Nebraska

In Nebraska, individuals in the following demographic groups have an increased likelihood of experiencing poverty: geographic location, persons of color, level of educational attainment, work status, parents in poverty, and degree of economic connectedness. The graphs on this page depict several of these trends.

Metro counties have higher youth poverty while rural counties have higher poverty among aging adults

Poverty Profiles

The profiles in poverty were developed as depictions of the reality of poverty for some Nebraskans. Profiles were developed using the U.S. Census Bureau's American Community Survey microdata from IPUMS for 2018-2020 5-Year Estimates. Data was analyzed in STATA and advanced search equitations were developed to identify survey responses of those most likely to be in poverty. A range of demographics were reviewed across each observation to develop the profiles. Profiles were selectively included and may be edited.

Among single moms with children under 18, 30% are in poverty or about 16,000 households
