

**ENVIRONMENTAL  
HEALTH & SAFETY**

---

**Hazardous Material Fact Sheet  
Aerosol Can Disposal**

---

The Nebraska Department of Energy and Environment (NDEE) has determined that used aerosol cans (including empty aerosol cans) must be handled as hazardous waste. Therefore:

- All used/unwanted/empty aerosol cans must be collected. Examples of used aerosol cans include but are not limited to: compressed air dusters, WD-40, spray paint, hair spray, whipped cream and cooking spray.
- Store empty/unwanted aerosol cans in closed, labeled containers. Label the containers, "Used Aerosol Cans".
- Used compressed gas cylinders (lecture bottles, butane and propane) are not aerosol cans and **must not** be included with the used aerosol cans. Please have them tagged for pick up separately.
- When a container is full, place the aerosol cans in a bag (double or triple bag if necessary), complete and attach a chemical collection tag (see the [Chemical Collection and Disposal Fact Sheet](#)) to the bag. If the bag is within the container, remove bag from container prior to pick-up. Contact EHS for pick-up and disposal.
- **Requests for pick-ups can be submitted on-line by completing the [Chemical Pick Up Form](#)**
