CONTACT TRACING

Who is considered a contact?

- Tested positive for COVID-19
- The infectious period starts 2 days prior to the start of symptoms
- Typically lasts 10 days from the start of symptoms if symptoms improve

Contact tracing focuses on close contacts who were:

- With the positive case while they were infectious
- Within 6 feet of the positive case
- For at least 15 minutes (cumulative)

Individuals are considered infectious 2 days prior to the start of symptoms or before the positive test was collected, if the person never experienced symptoms.

The University of Nebraska does not discriminate based on race, color, ethnicity, national origin, sex, pregnancy, sexual orientation, gender identity, religion, disability, age, genetic information, veteran status, marital status, and/or political affiliation in its programs, activities, or employment.
